

Managed Care Suite

Managed Care and Utilization-Based Incentives

ScriptValidate

Advanced Reporting

ScriptValidate

Overview

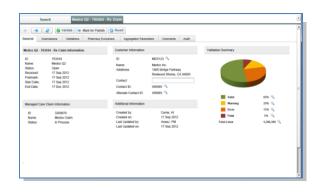

Model N ScriptValidate is the only Cloud-based script validation solution that combines the benefits of outsourcing with the visibility and control of enterprise-class software. The best-inclass application is available standalone or integrates with Model N Managed Care and Model N ImpACT analytic applications to create an end-to-end solution that maximizes contracted revenue across your Managed Care business.

Key Features

Create and Validate Claims

Create a single claim for a quarter and load multiple submissions/files within a claim. Validate all files together and view the results in a highly intuitive format.

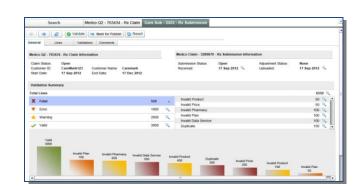

- Validate multiple submissions in a single claim
- Be notified of the right validation set to apply
- View results summary in an intuitive graphical format
- Drill down to look at specific error codes
- Accept or reject system accepted lines, override system rejected lines

Utilize Rich Industry-Standard Validations

Access 80+ industry-standard validations out of the box for comprehensive coverage and maximum revenue retention.

- Review aberrant quantities
- Uncover invalid products/plans/pharmacies
- Validate 340B pharmacy claims
- Check horizontal and vertical duplicates within and across business segments

ScriptValidate is the only Cloud-based script validation solution that combines the benefits of outsourcing with the visibility and control of enterprise- class software.

Leverage Configurable Setup Parameters

Use flexible and configurable default settings as well as business-specific defaults and thresholds to verify eligibility against contractually negotiated business rules.

- Set up National Council for Prescription Drug Programs (NCPDP), comma-separated value (CSV), or customer specific utilization file formats
- Define default or customer-specific validation rules by business segment
- Setup default of National Drug Code (NDC) specific thresholds for aberrant quantities, fill numbers, etc.
- Load standard NCPDP pharmacy roster to validate pharmacies
- Exclude pharmacies that are eligible for upfront discounting for specific effective periods

Define Aggregation Fields and Publish to Model N Managed Care

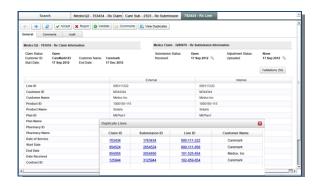

Define configurable aggregation parameters to roll up script data. Once claim processing is done the claim can be published to Model N or third-party Managed Care systems for downstream rebate processing in a single click.

- · Aggregate script data with flexible options defined by individual customer
- Select from daily, monthly, and quarterly aggregation options for internal and competitor products
- Sync in one click to Managed Care

Gain Complete Data Visibility

View summary and aggregated data or quickly navigate to the lowest possible level of detail to realize full visibility into validation data.

- Scan interactive drilldowns and charts for data exploration and analysis
- View all utilization claim fields including optional data attributes such as Formulary ID, Pharmacy Reimbursement, and Co-Pay Amount
