# Protect revenue by mitigating risk of Medicaid non-compliance

A flexible and scalable SaaS solution, Model N Medicaid enables you to efficiently comply with all government rebate calculation and reporting requirements, operationalize the end-to-end Medicaid rebate process, and access key insights to drive strategic decisions.

## Accurate unit rebate calculation

Automate the quarterly unit rebate amount (URA) calculation by leveraging the average manufacturer price (AMP) and best price (BP) from your Model N Government Pricing application or other method for performing government pricing calculations. Utilizing our powerful formula builder, you have access to 50 preloaded formulas and the flexibility to create your own formulas to address new calculations, state programs, or supplemental programs.

## Efficient claims processing

To support timely payments and mitigate the risk of interest penalties, Model N Medicaid performs validation tests on submitted claims to identify outliers and invalid units. Once you determine a claim is reasonable, you easily generate the required Reconciliation of State Invoice (ROSI) and Prior Quarter Adjustment Statement (PQAS) reports, as well as a consolidated payment package for prompt processing and submission.

## Compliant with government regulations

When requirements for Medicaid change, Model N ensures your organization is kept up to date with our Regulatory Update Packs (RUPs). Each RUP contains the necessary software and documentation you need to easily update your Medicaid processes to comply with new requirements, such as new Medicaid Drug Rebate Program (MDRP) file formats or updates to the URA calculation.

## Boost your Medicaid solution

Model N offers add-on applications to help you address your organization's specific Medicaid requirements.

- **Medicaid Intelligence –** Slice and dice the data used and created within Model N Medicaid for more complex analysis into trends to help reduce fraud, waste, and abuse.

- **Validata –** Scrub prescription-level data and identify duplicate line items, ineligible products, and missing information to support disputes and prevent overpayments and duplicate discounts with the 340B Drug Pricing Program and other programs.

- **340B Vigilance –** Identify prescriptions dispensed using drugs acquired at the 340B discount price and submitted to commercial or Medicaid payers for a discount. Using integrations with third-party data vendors, 340B Vigilance automatically processes inbound utilization data to identify 340B duplicate discounts. Once a prescription is flagged, you can determine the best way to recoup the money if payment has occurred or prevent the duplicate payment from happening.

**Let Model N handle Medicaid on your behalf**

Model N Business Services combines industry expertise, proven processes, and our purpose-built technology in one end-to-end solution. We take care of everything – formula management, rebate calculation, claims validation, and report generation – so you can focus on strategic initiatives.

## Reduce risk of non-compliance

✓ **Manage and process payments for Medicaid, state, and supplemental programs from one powerful platform.**

✓ **Produce consolidated payment packages with all necessary reports in a single click.**

✓ **Streamline processing to avoid overpayments and interest penalties.**

✓ **Maintain an audit trail of all Medicaid processing.**

✓ **Automate validations to identify any outliers in a claim.**

✓ **Stay up to date with current guidance through RUPs.**
