Model N

Reduce overpayments by validating payer rebate submissions

Pharmaceutical manufacturers often have tens to hundreds of payer contracts in place. This creates a complex web of rebates that can be a challenge for companies seeking ways to centralize data, ensure accurate and timely payments, and maximize profits.

Model N Validata helps you ensure you are only paying the right claims, at the right time, for the right amount. Validata utilizes our SaaS technology to offer automated script-level validation tools to help enforce agreement terms and reduce inaccurate payments across managed care rebates, Medicare, Medicaid, TRICARE, Coverage Gap rebates, and the Manufacturer Discount Program (MDP).

Maximizing managed care revenue

Billions of prescriptions are dispensed in the U.S. every year. Tracking the rebate programs associated with this volume has become a formidable task. Millions of transactions are submitted on a monthly and quarterly basis, and the sheer amount of transactional data created is challenging for all parties involved in the process. It's easy for errors to happen when all those prescription lines are summarized and submitted to pharmaceutical manufacturers for rebates. In the case where prescription lines are incorrectly included in a rebate, manufacturers end up overpaying their customers, which can amount to tens of millions of dollars in overpayments and ultimately, lost revenue.

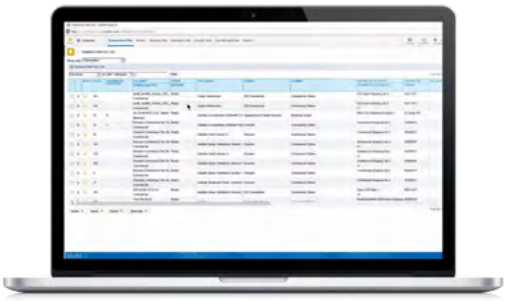

Receiving inconsistent, inaccurate, and unreliable data obscures visibility into which prescriptions are eligible for a rebate. Developing an automated workflow that allows contract, validation, and rebate analysts to monitor, investigate, and identify suspect claim lines in a timely and efficient manner reduces incorrect payments. This also keeps claim validation activities running smoothly, enabling you to remain compliant, grow revenue, and make sure that this vital piece of the supply chain operates as efficiently as possible.

Vital rebate claims data is essential

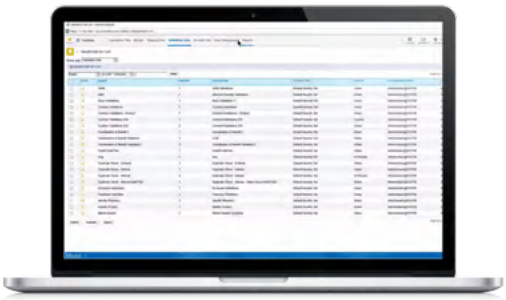

It's no secret that payers provide low-quality and inconsistent rebate claims data that is typically erroneous and uniquely formatted. That's why you need a solution that verifies and validates the information despite these hurdles. Validata coupled with Model N Payer Management allows you to not only improve rebate and payment accuracy, but also gain insight into contract performance, new channels, and revenue optimization opportunities.

Our script-level validation tools enable users to examine results and override exceptions where needed, within the unified workflow and based on business rules and contractual requirements. Accurate utilization information is published downstream for rebate processing, error reporting, and industry-standard reconciliation file generation. Since all data, intelligence, and reporting are centrally located and managed, users are more productive, throughput increases, and claims are paid properly and in a timely manner.

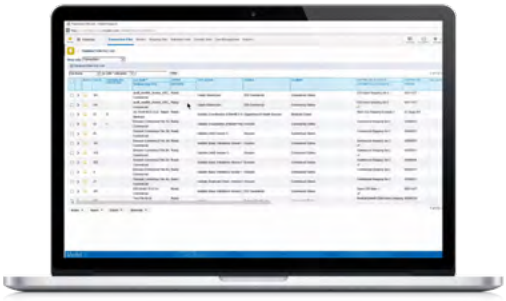

The transaction header

Specify all the information for your incoming detail data, as well as define which validations you want to run automatically post-import to streamline the process.

Duplicate check configuration

Through flexible configurations for validations, such as the duplicate check, you can define specific requirements to meet your business needs.

Transaction item list and validation results

The transaction item list contains details of the errors identified using the system and user-defined configurations, thresholds, and severities. Validated data is then seamlessly integrated with your rebate payment solution.

Integration with Truzo Drug Discount Management

Validata directly integrates with Truzo to bring Maximum Fair Price (MFP) effectuation tracking and 340B claims collection together in one platform. Reduce the risk of revenue leakage in managed care contracts by:

- Validating managed care and Medicare submissions against MFP and 340B script data.
- Reduce coordination-of-benefits issues and prevent overpayments.
- Strengthen compliance and eliminate the need for manual data reconciliation.

Efficiently validate payer rebate submissions with trusted data

- **Improve rebate and payment accuracy.**
- **Access actionable information for decision-making through configurable dashboards and reports.**
- **Reverse claims if payments were made to the wrong market segment.**
- **Ensure compliance and auditability.**

Ensure invalid claims are scrubbed from payers' rebate submissions.
